

ELEC 377 Lab 5 – Software Security

Testing Documentation

The md5 hash of the password from the environment variables in the server attack was MD5=6e7000f5a921c8927ad1d528f1c09b50. The output of the environment variables for both attacks can be seen in the repository as selfcompEnvironmentVariables.txt and clientEnvironmentVariables.txt. After using the provided media information to derive likely passwords and entering the guess with the format "echo -n Grace1997 | md5sum," it was determined to be Grace1997.
